

AI PRODUCT ENGINEER

B2B INDEPENDENT CONTRACTOR & AI ARCHITECT

● AVAILABLE FOR RETAINERS

Email: ghorhh473@gmail.com

GitHub: github.com/ghorhh-coder

Portfolio: portfolio-amber-iota-78.vercel.app

Location: India (IST) • Open for US/EU Async & Overlap

Contracting: B2B Retainer • Parent Co-Signed (W-8BEN/NDA Ready)

EXECUTIVE SUMMARY

AI-First Software Contractor & Product Engineer specializing in rapid production deployment, LLM Evals & Observability, multi-agent orchestration (LangGraph/LangChain), and vector retrieval pipelines (pgvector/Pinecone). Leveraging SOTA AI IDEs to ship production-ready, cost-optimized, and resilient AI platforms 5x faster than traditional software engineering lifecycles under flat monthly retainers.

CONTRACT ENGAGEMENTS & PROVEN TRACK RECORD

LEAD AI PRODUCT ENGINEER (CONTRACT)

4 Months • Milestone Retainer

Confidential Startup (Valued at \$6.5M)

- Engineered from scratch a highly scalable, full-stack application for a bootstrapped founder, securing 0.3% founding equity based on architectural milestone delivery.
- Architected and deployed a custom, zero-knowledge client-side encryption framework using Web Crypto API (AES-GCM/Diffie-Hellman) guaranteeing sub-100ms processing latency and absolute data privacy.
- Integrated robust authentication structures supporting frictionless 1-click OAuth pipelines via Google, GitHub, and Microsoft for 10K+ user sessions.
- Eliminated server-side single points of failure by shipping serverless edge workers, semantic caching (Redis), and automated push notification synchronization maintaining 99.9% uptime.

INDEPENDENT AI PRODUCT ENGINEER & SYSTEMS SPECIALIST

2+ Years Experience • B2B Contracts

AI Software Architecture & Autonomous Systems

- Mastered 2+ years of SOTA AI IDE & Agentic Tooling evolution (Cursor AI → Windsurf / Devin AI → Google Antigravity) accelerating software delivery velocity by up to 5x.
- Engineered production-grade RAG and agentic workflows using LangGraph, pgvector, and Pinecone, reducing token cost by ~40% via dynamic model routing (Gemini 3.6 Flash / Sonnet).
- Implemented end-to-end LLM Evaluation pipelines (LangSmith / OpenTelemetry) and adversarial prompt guardrails, achieving 95%+ instruction compliance and zero hallucination leaks.
- Shipped cross-platform native installers (.msi, .exe) and mobile PWAs alongside full-stack TypeScript ecosystems (Next.js 16, React 19, Node.js, Prisma, Neon Postgres).

CORE TECHNICAL CAPABILITY MATRIX

AI & AGENTIC ORCHESTRATION

Gemini 3.6 Flash/Pro, LangGraph & LangChain, Vector DBs (pgvector / Pinecone), LLM Evals & Tracing (LangSmith / OpenTelemetry), Hallucination Guardrails, RAG Pipelines, + SOTA Model Routing

FRONTEND & NATIVE APPS

Next.js 16 (App Router), React 19 & TypeScript, Desktop Apps (.msi, .exe), Mobile Apps (.apk, PWA), Glassmorphic UI Design, + Any Modern UI Framework

BACKEND & ECOSYSTEM

Python (Asyncio / FastAPI), Node.js, Prisma ORM & Postgres, Redis (Semantic Caching), Token Economics & Cost Optimization, REST & GraphQL APIs, + Agnostic Stack Integration

SECURITY & DISTRIBUTION

Zero-Knowledge Crypto, OAuth 2.0 Auth, Native Installers (.msi/.exe), Vercel Edge & Cloudflare, CI/CD Build Automation, + Enterprise Custom Systems
